Steel Tornado Shelters

Protection Shelters LLC provides you and your loved ones a safe place to go in the event of a tornado.

- Steel construction welded with 70,000 pound tensile strength welds.
- Crush proof strength rated at 110,000 pounds.
- Steel doors have (3) ¾" x 14" deadbolt (3) 6" x 1 ½" welded steel hinges.
- Tested and passed at Texas Tech Wind Science and Debris impact testing.
- Bears a Certificate and Seal from the National Storm Shelter Association stating the design, construction and installation meets the International Code Council ICC 500 2008.
- Structurally built to bear wind loads in excess of 250 mph. (EF5 Tornado)

These shelters are designed to go inside so you don't have to go outside and fight flying debris, hail, wind, rain, and darkness.

Functionality

Doors are normally 36" wide to accommodate mobility impaired. The door can be placed wherever you want: end, side, your choice. You can choose an inswing door or outswing door as there are no guidelines on door swing until you reach group shelter status.

Installation

- Each shelter is installed by our trained installers with quality and integrity to assure total customer satisfaction.
- Each shelter has an anchoring system of anchor bolts and epoxy to double anchor your shelter.
- Shelter can be built to your size specifications depending on family size or room that you have in garage or basement for tornado shelter.

Safety

Don't be fooled by a basement as they are not storm shelters. Greensburg, KS was proof of that. Our shelters are FOREVER!

Forget stairs. Walk on in and be in the comfort of your garage or basement and be safe.

If you need more storage, place anything you can get onto the roof of your shelter. You can also install peg board on sides, and hang more stuff on the outside of the shelter.

Have pets? Bring them along as they can always be at your side as you walk to safety in your garage shelter.
